The world famous Yellowstone cutthroat trout fishery in the South Fork of the Snake River is in your hands!

South Fork Snake River Anglers:

Rainbow Trout Harvest is Encouraged!

THERE IS NO LIMIT ON RAINBOW TROUT IN SOUTH FORK SNAKE RIVER!

Native Yellowstone cutthroat trout are highly valued by South Fork anglers for their aggressive nature and fast growth. Non-native rainbow trout not only compete with Yellowstone cutthroat trout, but they also interbreed with them, producing hybrids. Hybridization is a serious threat to the native cutthroat trout fishery. IDFG is attempting to minimize the level of hybridization in the South Fork by encouraging anglers to harvest rainbow trout, and by using traps to prevent rainbows from spawning in important cutthroat trout spawning tributaries. With your support, these efforts will help insure this healthy Yellowstone cutthroat population and unique angling opportunity will be around for generations to come...so enjoy a shore lunch, or take some South Fork rainbow trout home for dinner – you'll be doing the fishery a favor!

Attention South Fork Anglers

To increase rainbow trout harvest opportunity, the entire South Fork of the Snake River has been opened all year. The South Fork is an important wintering area for big game and trumpeter swans and is an important wintering and nesting area for bald eagles. To ensure this opportunity in the future, anglers are urged to minimize disturbances to wintering animals and expected to obey area closures around eagle nests.
